

## CREDANT Solutions for SB 1386 Compliance

SB 1386 can impact anyone doing business in California.

### CREDANT SOLUTION

*CREDANT Mobile Guardian (CMG) ensures that SB 1386 encryption and security mandates are consistently and efficiently enforced – regardless of where the data resides.*

#### Only CMG enables organizations to:

- › Encrypt and secure data across multiple, diverse platforms from a single console.
- › Create automatic audit trails that offer proof of end-to-end data security.
- › Provide a transparent end-user interface that supports user productivity while keeping data safe.

*CMG's Intelligent Encryption provides centrally-managed, highly scalable and architecturally flexible security to manage all data endpoints. With CREDANT, organizations can:*

- › Ensure data security without the risk of users placing data in areas that are not encrypted.
- › Provide confidentiality, privacy and auditing of data residing on any endpoint.
- › Protect sensitive data from unwarranted access, thus reducing risk of internal breaches.

### Regulatory overview

SB 1386 is a California law regulating the privacy of personal information.

The law applies to an agency, person or business that conducts business in California and owns or licenses computerized “personal information.” Compliance requires that these entities immediately notify any California resident if they believe the resident’s unencrypted, personal information that they own or license has been disclosed.

### The compliance challenge

Compliance with SB 1386 has become a major security issue over the past several years. Although mandated by California, the regulations apply to both California and out-of-state entities anywhere in the world that do business in California.

Adding to the law’s impact is its relatively broad definition of personal information. This includes an individual’s first and last name along with numbers from a Social Security account, debit or credit card, driver’s license, California ID card, or bank account number. Almost anyone today has this sort of information stored in a multitude of company databases as well as PCs, laptops, handhelds, smartphones, USB drives and CD-DVDs.

At the same time, it is important to note that SB 1386 does not apply to encrypted information. Companies can avoid the reporting requirement by encrypting all personal information. They can also avoid reporting if data does not contain personal information relating to a California resident.

As a result, a significant part of compliance with SB 1386 involves encrypting and safeguarding this personal information, regardless of its location.

### CREDANT

More than 700 enterprises and government agencies – including 50 of the Global 500 – rely on CREDANT to ensure security compliance, protect their brand and enhance IT and end-user productivity.
