

# Protecting Data Wherever It Resides

Data security is  
about more than just  
encrypting the disk

## Minimizing Risk – Maximizing Efficiency

Laptops as a desktop replacement, the use of all sorts of mobile devices and external storage media provide a tremendous improvement to workforce productivity. Yet, pervasive computing in a constantly changing environment, and comprehensive networks with many disconnected endpoints make enterprises vulnerable to the loss, theft or unauthorised access to their most valuable data – be it from outsiders or insiders. This can result in significant direct costs, company brand damage, noncompliance with regulations, and loss of customer and partner confidence.

The company's reputation and reliability is at risk. Protecting data on vulnerable endpoints is the responsibility of every organisation.

Therefore, it is imperative to enterprises today, to be equipped with a security solution that detects all devices accessing the company network, implements and enforces centrally defined and managed security policies and can prove compliance with security regulations without interfering with operational processes and workforce productivity.

## The Solution – CREDANT Mobile Guardian

CREDANT Mobile Guardian is the only truly integrated, centrally managed, policy-based mobile data security solution protecting the broadest number of mobile device platforms and supporting the whole data security life cycle. The solution maintains the inherent portability and productivity benefits of mobile devices, while ensuring confidentiality and full, easy recovery of corporate data. Its ease-of-use ensures quick deployment, full user adoption and cost-effective management.

We Protect What Matters.

## The CREDANT Approach

Since its founding in 2001, CREDANT has pioneered the concept that true protection of data can only be ensured by an intelligent, holistic, policy-based solution that follows, manages and secures data wherever it goes and wherever it resides – on desktop PCs, laptops, notebooks, Smartphones, PDAs, USB flash drives and other removable storage media. Today, CREDANT offers an integrated, scalable solution that provides:

- True protection against external as well as internal threats, by allowing the separation of system and security administration
- Policy-based encryption across all endpoints for the definition, enforcement and support of customised data security policies across all devices, in line with the specific needs of an organisation, department or user group
- Automated and documented enforcement of security policies rather than having to rely on user discipline – without impacting workforce productivity
- Efficient security solution management through the use of a single centralized console
- Complete control of endpoint data security without impacting existing operational processes
- Rapid implementation, remote roll-out and maintenance, minimizing the Total Cost of Ownership (TCO)

## The CREDANT Value

CREDANT's data-centric endpoint security solution ensures:

- The highest level of data protection
- Full benefit of mobile computing
- The lowest Total Cost of Ownership (TCO)

The Data Security Lifecycle

**CREDANT** Technologies is a leading provider of endpoint data protection and management solutions. Chosen in 2007 as the fastest growing, privately-held security company in the US Inc 500 survey, CREDANT Technologies enables its customers to leverage the business productivity benefits of modern pervasive computing without risks and operational constraints.

- Over 620 companies and government agencies worldwide, including 50 of the FORTUNE Global 500, use CREDANT's software to secure vulnerable data for hundreds of thousands of users.
- The data of more than 4.8 million users is secured by CREDANT software, each backed by our global network of direct support and strategic partners.
- CREDANT is dedicated to the highest degree of customer satisfaction, achieving over 90% approval rating in our latest customer satisfaction survey. We invest heavily in offering the best installation, support and maintenance services possible.
